Annual Subject Index: 1994

Access control systems
  security enforcement, specification, validation, verification 437
Action and time theory
  revision 847
Adele 2
  a configuration management system 621
Air traffic control
  cooperative systems design, sociological input 357
Algebra
  process, iteration, equational axioms, completeness 259
  process, iteration, nesting, handshaking, auxiliary actions 243
Algorithm
  data retrieval and linked lists 598
  edge-solvable mutual exclusion graphs 129
  geometric computation and degeneracy 35
  hypercube-labeling 124
  IFS and RIA 629
  L-system specification 58
  program analysis of Knuth's polynomial addition 795
  time-oriented query languages and Boolean operators 576
Amadeus
  parallel programming, object-oriented, distribution systems 499
Artificial intelligence
  axiomatization models 114
ASLB
  all-sharing load balancing system, analysis of performance 779
Atomic transactions
  object-orientated systems, open transaction processing, comandos 487
Automatic speech recognition
  real-time applications 735

Block truncation coding
  digital image compression, survey 308
Boolean operators
  applications 576
  time-oriented query languages 576
Browsing system
  HyperNet 88

Cache memory
  block structured program, enhanced data retrieval 610
CAD
  spatial and temporal databases 164
Calculator Project
  computer based learning 177
CCS
  subsets, decidable, limits 233
Comandos
  atomic transactions, object-orientated systems, open transaction processing 487
  distributed application platform, overview 477
  distributed systems management, toolset 509
  Guide language, object-oriented, design choices 519
  orthogonal persistence, object-oriented, heterogeneous distributed, IK 531
Communication protocol
  incremental verification 698
Communications
  CSCW 653
Computer assisted animation
  manipulation 2D images 830
Cooperative systems
  design, air traffic control, sociological input 357
Copyright law
  1992 regulations 79
  software protection 79
Corrective maintenance
  a systematic approach 764
Cryptanalysis
  automated, transposition ciphers, simulated annealing 429
Cryptography
  secret sharing schemes 199
CSCW
  computer supported cooperative work, virtual reality systems 653

Data distribution
  schemes, a semantic approach 561
  SQL, design and fragmentation 561
Data retrieval
  DCT 598
Database
  a unified model for spatial and temporal information 26
  CAD 164
  carousel type mass storage systems 873
  object oriented query languages 858
  object oriented systems 888
  relative and absolute time modelling 588
  TIN, use in terrain models 43
DBMS
  database management data system 16
DCT
  distribution changing techniques filter, data retrieval 598
Degeneracy
  geometric computation 35
Design technology
  electronic organizers, memory prosthesis 153
Diakoptics
  domain decomposition parallel computing 840
Digital image

compression, survey, block truncation coding 308
Drawing
graphs, program, minimal slope set 139
DROL
logic environment, distributed programming, parlog 407

ECFSM
incremental protocol verification 698
Edge-solvable mutual exclusion
on optimal algorithm 129
Electronic organizers
memory prosthesis 153
Extended communicating finite state machine
ECFSM 698

FDDI
fiber distributed data interface 188
Formal specifications
software development 753

G15 systems
spatial and temporal databases 164
Gate Matrix Layout
polynomial-time algorithm, three-track, VLSI layout styles 449
Geometric computation
use of perturbation in numerical analysis 35
Geometric reasoning
tool, successive improvement approach, complex metal structures 377
GIS
cartographic information systems, C1SRSG 3
DBMS, geographic and environmental data system 16
spatial databases, triangulated irregular network 43
Graph algorithms
optimizing random partitioning 639
Graphics
device, structure, resolution, analysis, spatial domain mathematics 367
Guide language
design choices, object-oriented, comandos 519

Hardware design
engineering methods in industry, VLSI 96
HyperNet
browsing of multimedia documents 88

IFS
iterated function systems 629
IK
orthogonal persistence, object-oriented, heterogeneous distributed, comandos 531
Information systems
object oriented systems modelling 669
Interval relations
databases 164

Lossy text compression
83

Mass storage systems
optimal arrangement 873
Message sequence charts
algebraic semantics, process algebra techniques 269
Mixed radix notation
residue number conversion 907
Modular
program 219
Multi-media computing
real-time scheduling of disk traffic 691
Multimedia networks
fiber optic ring media access control, MAC 188

Networks
parallel computing, routing strategies 206
RCN, recursively connected system 206

OBASE
geographical information system 3
Object oriented query languages
evaluation 858
Object oriented systems
OO specification 888

Parallel processing
advances in VLSI 124
Parallel programming
object-oriented, distribution systems, Amadeus 499
run-time monitoring, logical clock approach 333
Parlog
distributed programming, DROL logic environment 407
Pattern recognition
behavioural events, functional combinators, real-time 385
Petri net theory
application to automated manufacturing systems 67
Process algebra
iteration, equational axioms, completeness 259
iteration, nesting, handshaking, auxiliary actions 243
message sequence charts, algebraic semantics 269
sliding window protocol, correctness proof, μCRL 289
Process interference
SuperPascal, interference control, parallel language, block-structured 399
Program
primality testing, division operations and modular exponentiation 219
Programming
partial determinisms, functional language definiteness and unfoldability 711
Protection
self authenticating proxies, single mechanism 422

Random partitioning
graph algorithms 639
Reve's puzzle
iterative algorithm, three-peg problem 463
RIA
random iterated algorithm 629

Security enforcement
access control systems, specification, validation, verification 437
Self-affine functions
an L-system specification algorithm 58
Semantic and generative models
research paradigms of text compression 83
Simulator tools
theory for, formalization 279
Software bugs
corrective maintenance 764
Software development
improvement 683
improved reliability 753
SP theory
data compression and computing language 745
Spatial and temporal information
unified model 26
Spatial domain mathematics
graphics device, structure/resolution analysis 367
Spiral hashing
a discrete analysis 715
SQL
data distribution 561
SuperPascal
interference control, parallel language, block-structured 399
System navigation
HyperNet 88
Systems modelling
Jackson approach to information systems 669

Teaching tools
calculators, The Calculator Project 177
Temporal logic
action and time theory 847
artificial intelligence 114
Threshold schemes
cryptography 199

Virtual environments
multi-actor virtual reality systems, communications support 653
VLSI
formal verification for hardware design 96
greesy hypercube-labeling algorithm 124
